

# rScriptor

## “The Next Generation in Radiology Reporting & Analytics”

With this single program a radiology practice can create, validate, normalize and analyze all of their radiology reports irrespective of the number and variety of PACS or dictation systems in use.

### CREATE

- Structured or Narrative Reports
- Pre-configured with hundreds of report templates
- Radiologists keep their eyes on the images at all times while dictating
- Dictate positive findings only
- Create findings and impression simultaneously

### VALIDATE

- Error checking
- Coding compliance
- MIPS compliance
- Radiologist warned of errors or compliance failures before report is signed so that they can be corrected

### NORMALIZE

- Procedures
- Anatomy

### ANALYZE

- Volume
- Quality
- Technical

**Vendor-neutral:** Compatible with PowerScribe, Dragon and more.  
**Cloud-based • SaaS Model • 10 million+ reports created**  
**Created by Radiologists for Radiologists**

**rScriptor** integrates with your existing voice recognition software to create high-quality radiology reports in a fraction of the time required when using voice recognition alone. This single program will create, validate, normalize and analyze radiology reports from all facilities served by a radiology practice. Simply place **rScriptor** on your workstation, login and its ready for use. It comes pre-configured with hundreds of radiology report templates that can be customized by both the radiology practice and radiologists as needed. It also includes a detailed knowledge base which can be used to insert ACR incidental findings recommendations, lookup trauma grading scales, review US vascular tables and much more.

**Give it a try.**

**We think you will find it truly is the next generation in radiology reporting and analytics.**
